

Product Transition Guide

TN (OLD): NHD-4.3-480272EF-Axxx | IPS (NEW): NHD-4.3-480272EF-ASXP

The new 4.3" IPS TFT display has been designed with the same mechanical footprint and pinout as the older TN display. This makes the IPS display compatible with controller boards, assemblies, enclosures, and other components that are presently used with the TN display.

The purpose of this document is to highlight and explain the key differences that need to be accounted for when transitioning from our 4.3" TN TFT display to our new 4.3" IPS TFT display.

Design Improvements

- Better EMC with built-in EMI shielding
- Better color reproduction throughout the color gamut
- Better color and image consistency when viewed from various angles
- Better optical characteristics (higher contrast, higher brightness, wider viewing angles)
- Better FPC design (less susceptible to nicks/tears, larger bendable area)

Software

The new 4.3" IPS TFT display can be driven using the same 24-bit RGB input timing as the 4.3" TN TFT display. Our testing has indicated the new IPS display is fully backwards compatible, and no software updates are required. As drive conditions may not be the same for all customers, we recommend you test samples to verify compatibility within your application.
